政府类

Dr. Achebe:

One of the most challenging problems in modern society is to have the most up-to-date skills for the workplace. To solve this, the government has decided to give all adults over the age of 25 a training course to learn new skills. Do you think it is an effective way for the government to spend its money?

Paul:

If the government could truly provide training courses for everyone, I bet that the government would receive the admiration of all. Our society is currently highly competitive, and every individual bears immense pressure. Training courses would allow individuals aged 25 and above to feel more secure without worrying about being left behind by society.

Claire:

It seems like we have overlooked a crucial detail, which is that the cost of implementing such a program would be enormous. Not only would it incur significant expenses for the government, but it would also impose substantial time costs on individuals participating in the training. Perhaps natural competition and market-driven attrition are the rules that must be followed.

Agree with the government to give all adults a training course:

- **Increased competitiveness:** As technology rapidly evolves, the need to update skills for the workplace is paramount. Free training programs can equip adults with the latest skills, making them more competitive in the job market.

- **Economic growth:** A highly skilled workforce leads to increased productivity and economic growth. Government investment in skills training can be seen as an investment in the future economy.

Disagree with the government to give all adults a training course:

- **High costs:** Providing training programs for all adults over 25 would require substantial government funding, potentially straining public finances.
- **Inefficiency:** Free programs might lead to some individuals taking advantage of the system without a genuine commitment to learning, resulting in wasted resources.

Dr. Achebe:

Do people like to keep pets? Nowadays, an increasing number of individuals consider pets as part of their family, leading to significant expenses associated with pet ownership. Some people view expenses as pointless waste, perceiving pets just as animals. How do you perceive this issue? Do you think people should spend a significant amount on their pets?

Paul:

I believe it is necessary. Every life deserves respect, and the emotional value that pets provide us is priceless. If we choose to have pets, we should take responsibility for them. Even if the expenses are significant, it is normal.

Claire:

I disagree with this perspective. Even if pets do not require significant expenses, they can still live a good life. They only need basic necessities for survival, and additional expenses are often imposed by humans but I believe it is unwise if the expenses become excessive.

Agree that people should spend a significant amount on their pets:

- **Health and well-being:** Proper care for pets, including quality food, veterinary visits, and enrichment activities, can contribute to their physical and mental well-being, extending their lifespan and reducing potential health issues.
- **Responsibility:** Many people view their pets as family members and feel a strong sense of responsibility for their care. This includes providing them with the best possible life, which may involve significant financial investment.

Disagree that people should spend a significant amount on their pets:

- **Financial burden:** Significant spending on pets can strain personal finances, especially for those with limited income. This can lead to financial stress and compromise other important needs.
- **Ethical considerations:** Some argue that excessive spending on pets, particularly when it comes at the expense of other needs, can be seen as irresponsible and potentially unethical.

Dr. Achebe:

Do people idolize celebrities? Or, to put it another way, if your favorite celebrity endorses a product, would you buy it regardless of whether you actually need it? Nowadays, the celebrity effect is becoming increasingly prominent, and hiring a popular artist is considered the best choice for a product to sell well. Our upcoming discussion topic is: should celebrities be held directly responsible for the products or services they endorse?

Paul:

I believe it is important to take responsibility for endorsements, as people choose products based on their trust in the celebrity endorsing them. As a spokesperson, the celebrity should personally experience the product or service before recommending it to others, some celebrities even accept advertisements without any personal interaction with the product itself, which is an unethical behavior.

Claire:

I don't think the problem should be approached in that way. Even if celebrities personally experience a product or service, there's no guarantee that the general public will have the same experience as the celebrities. The real responsibility lies with the companies producing the products.

Celebrities **should** be held directly responsible for the products or services they endorse:

- **Influence and trust:** Celebrities wield significant influence over their fans, who often trust their opinions and recommendations. This influence can be misused to promote products or services that are harmful or misleading. Holding them responsible can deter such practices.
- **Ethical obligation:** Celebrities have a responsibility to use their platform ethically and not endorse products they don't genuinely believe in or haven't thoroughly researched.

Celebrities **should not** be held directly responsible for the products or services they endorse:

- **Limited knowledge:** Celebrities are often not experts on the products they endorse and may rely on information provided by companies. Holding them directly responsible might be unfair if they were misled or lacked sufficient knowledge.
- **Focus on the companies:** The primary responsibility for misleading or harmful products lies with the companies that produce them, not the celebrities who endorse them. Holding companies accountable is more effective in addressing the root cause of the problem.

工作类

Dr. Achebe:

With the continuous development of technology and the internet, more and more companies are adopting the online work mode. Since its inception, this mode has sparked significant controversy. How do you view the online work mode?

Paul:

In my opinion, I believe that online work is a highly efficient and advanced mode of work. As you know, commuting often leaves people exhausted, and working online can help individuals maintain their best state to deal with their tasks.

Claire:

I believe that while the online work mode does have its advantages, working from home and saving commuting time does not necessarily equate to efficiency. Working from home may actually lead to greater inertia and potentially result in lower productivity.

Positive Aspects of Online Work Mode:

- **Flexibility:** Remote work offers employees the flexibility to work from anywhere, allowing them to better balance work and personal life. This flexibility can lead to increased job satisfaction and improved work-life balance.
- **Cost Savings:** Online work eliminates the need for commuting, saving time and money on transportation costs. It also reduces expenses related to office space and utilities for both employees and employers.

Challenges of Online Work Mode:

- **Communication Challenges:** Remote work can sometimes lead to communication

challenges, such as misinterpretation of messages or lack of face-to-face interaction. Building strong communication channels and utilizing appropriate tools is essential to overcome these challenges.

- **Isolation and Burnout:** Working remotely can lead to feelings of isolation and loneliness, especially for individuals who thrive on social interactions. Additionally, the boundary between work and personal life can become blurred, leading to burnout if not managed effectively.

Dr. Achebe:

This week let's discuss the most important characteristics of a successful leader or politician. A person who is able to succeed naturally possesses many outstanding qualities. As political science students, we aspire to become accomplished individuals in the future. In your opinion, what do you think is the most crucial characteristic for becoming a successful politician or leader?

Paul:

I believe that communication skills are the most important. A leader or politician who cannot communicate effectively with colleagues, subordinates, and the general public will find it difficult to make progress.

Claire:

I believe the most important characteristic is having a global perspective. After all, the role of a leader is to guide everyone toward a better direction, and it is difficult to lead a team effectively without understanding the bigger picture.

The **most crucial characteristics** for becoming a successful politician or leader:

- **Trust and credibility:** Integrity builds trust and credibility with the people a leader serves. When people believe a leader is honest and acts with their best interests in mind, they are more likely to follow and support them.
- **Ethical decision-making:** Integrity guides leaders to make ethical decisions, even when those decisions are difficult or unpopular. It prevents them from succumbing to corruption or self-serving motives.
- **Long-term success:** A leader with integrity is more likely to build a lasting legacy, as their actions are driven by principle rather than short-term gains.
- **Inspiring others:** Integrity inspires others to follow their example and strive for higher standards. It creates a culture of honesty and accountability within an organization or society.

Dr. Achebe:

We all know that work styles vary, and each person has their own way and pace of want to discuss the topic of whether you think work should be done one by one or if it is better to work on several projects simultaneously

Paul:

I believe it would be better to do it one by one, as it allows us some time to organize things and prevents everything from becoming chaotic.

Claire:

I agree with working on several projects simultaneously. This not only ensures our efficiency but also helps us develop our critical thinking and multitasking skills across different dimensions.

Working on One Project at a Time:

- **Focused Attention:** Working on one project at a time allows individuals to concentrate their efforts, attention, and energy on completing that project efficiently and effectively. This focused approach can lead to higher quality outcomes and fewer errors.
- **Clear Prioritization:** Working sequentially on projects enables clear prioritization and a structured workflow. It can help individuals and teams maintain a clear focus on the current task without being overwhelmed by the demands of multiple projects.

Working on Several Projects Simultaneously:

- **Optimal Resource Utilization:** Working on multiple projects simultaneously can optimize resource utilization, especially when teams have overlapping skills and expertise. It can ensure that team members are engaged and productive across different projects.
- **Enhanced Creativity and Innovation:** Switching between different projects can stimulate creativity and innovation by exposing individuals to diverse challenges and perspectives. This cross-pollination of ideas can lead to novel solutions and approaches.

Dr. Achebe:

Next semester, we will be taking a course on simulated entrepreneurship, which will help us better apply the theoretical knowledge we have learned. In today's class, I would like to discuss what the most important factor for successful entrepreneurship is.

Paul:

In my opinion, perseverance is crucial. I don't believe that starting a new venture will be smooth sailing. To succeed, it is essential to be able to persevere, not to retreat or give up, and to stay committed to one's goals. Only by persevering can one achieve entrepreneurial success.

Claire:

I believe that choosing a unique project is even more important. We need to capture the attention of consumers by selecting a project that aligns with market trends and has innovative elements in order to establish a solid foundation. If I were to start a pizza shop with no creativity or innovation, I would undoubtedly go bankrupt quickly, as the market is already saturated.

The most important factors for successful entrepreneurship:

- **Overcoming Challenges:** Entrepreneurship is inherently risky and filled with challenges. From market fluctuations to unexpected setbacks, entrepreneurs face constant hurdles. Resilience allows them to bounce back from failures, learn from mistakes, and adapt to changing circumstances.
- **Perseverance:** Building a successful business takes time, effort, and dedication. Resilience fuels the perseverance needed to keep going, even when faced with obstacles and doubts.

- **Adaptability:** The business landscape is constantly evolving. Resilient entrepreneurs are able to adapt their strategies, products, and services to meet changing market demands and customer needs.
- **Mental Toughness:** Entrepreneurship can be emotionally demanding. Resilience provides the mental toughness to handle stress, maintain a positive attitude, and stay motivated in the face of adversity.

Dr. Achebe:

You may have also noticed that many businesses today are starting to contribute to environmental causes. They bear the responsibility for the environment and society. However, there are some companies that, in order to maintain low product prices, do not invest much in environmental efforts. This behavior is supported by consumers. How do you view this issue? Should companies prioritize cost savings over environmental expenses to ensure low product prices?

Paul:

believe it is necessary. For the average person, we are more concerned about prices, as it affects our quality of life. If it were up to me, I would strongly support companies that prioritize consumer considerations.

Claire:

disagree with this viewpoint. I understand the mindset of consumers, but companies, as larger stakeholders in environmental responsibility, should take the lead in making contributions. If environmental expenses become routine, people will no longer resist environmental taxes.

Agree that companies should prioritize cost savings over environmental expenses to ensure low product prices:

- **Competitive Pricing:** Prioritizing cost savings can enable companies to offer products at competitive prices, making them more attractive to consumers in a price-sensitive market. This can help companies gain a larger market share and increase profitability.
- **Business Viability:** For many businesses, especially small and medium-sized enterprises, maintaining low production costs is essential for survival in a competitive market. Prioritizing cost savings can help ensure the financial sustainability of the company in the short term.

Disagree that companies should prioritize cost savings over environmental expenses to ensure low product prices:

- **Long-Term Sustainability:** Prioritizing environmental expenses, such as investing in eco-friendly practices and technologies, can contribute to the long-term sustainability of the business and the planet. This can help mitigate climate change, reduce waste, and protect natural resources for future generations.
- **Regulatory Compliance:** Many countries are implementing stricter environmental regulations to address climate change and environmental degradation. Prioritizing environmental expenses can help companies comply with regulations, avoid fines, and maintain a positive relationship with regulatory authorities.

Dr. Achebe:

Nowadays, our lives have become completely accustomed to and reliant on the benefits brought by technological advancements. We can hardly imagine a life without technology. In this class, let's discuss one of the greatest technological innovations in recent years - artificial intelligence. Do you think the limitless potential of AI also implies limitless dangers?

Paul:

I don't agree with that. AI is born out of human intelligence and naturally remains under our control. Even though I acknowledge that AI can sometimes become a double-edged sword, it is primarily due to unethical design and improper usage. I believe the real issue lies in regulating the design of AI strictly raising ethical standards, educating people on the responsible use of AI, and avoiding the spread of negative and harmful information.

Claire:

I believe that the unlimited development of AI indeed carries significant potential dangers. Recently, I came across a news story about a man who committed suicide under the guidance of a chatbot AI. While I agree with what you said, Alex, implementing those measures is extremely difficult. Instead of relying solely on ethical standards and human self-control to address the issue, I think we should consider limiting the advancement of AI.

Agree that the limitless potential of AI also implies limitless dangers:

- **Job Displacement:** The widespread adoption of AI and automation technologies could lead to job losses in certain sectors, potentially widening economic inequalities and creating social disruption. Certain jobs may be at risk of being automated, leading to unemployment and underemployment.
- **Ethical Concerns:** AI systems can exhibit biases and discriminatory behavior if not

properly designed and monitored. This could result in unfair treatment of individuals and perpetuate existing societal inequalities.

Disagree that the limitless potential of AI also implies limitless dangers:

- **Innovation and Progress:** AI has the potential to revolutionize various industries, leading to increased productivity, efficiency, and innovation. It can help solve complex problems and drive significant advancements in fields such as healthcare, transportation, and finance.
- **Enhanced Decision-Making:** AI technologies can analyze vast amounts of data quickly and accurately, enabling better decision-making processes in areas like healthcare diagnosis, financial forecasting, and personalized recommendations.

Dr. Achebe:

This week, our focus in class is the role of high school teachers. From kindergarten to university, the most important person that influences us is, to a great extent, the teacher. A teacher has a lot of roles in education. Apart from teaching academic knowledge. What ability do you think is the most important for a teacher of high school students (ages 15-18) to have?

Paul:

I think due to the development of society, the increasing competitiveness, and the heavy academic burden of students, the psychological problems of many primary and middle school students are becoming more and more serious. Teachers should have the ability to educate students about their mental health in class and help them.

Claire:

From my perspective, choosing a major is very important because it concerns our college life, our career, and even our future life. Therefore, we need to choose our major with discretion. Thus the ability to give good advice to students about planning for their future is essential as a high school teacher.

The most important abilities for a teacher in high schools:

- **Clear Instruction:** High school students benefit greatly from clear and precise instructions. A teacher who can communicate complex ideas in a way that is easy for students to understand can enhance their learning experience.
- **Engagement:** Effective communication helps in engaging students in the learning process. A teacher who can communicate in a way that captures and maintains students' interest can create a dynamic and interactive classroom environment.

- **Building Relationships:** Good communication skills are essential for building positive relationships with students. By being approachable, empathetic, and understanding, a teacher can create a supportive environment where students feel comfortable expressing themselves.
- **Feedback and Guidance:** Providing constructive feedback and guidance is a key aspect of teaching. Teachers need to communicate feedback in a way that is helpful and encouraging, guiding students towards improvement and growth.
